## Chapter 1 Fun with the Periodic Table

Chapter Challenge	2
Activity 1: Organizing a Store	5
<i>Mendeleev, organizing principles, trends, analysis</i>	
Activity 2: Elements and Their Properties	7
<i>Physical and chemical properties, elements, conductivity, reactivity, pH of oxides, metals and nonmetals</i>	
Activity 3: Atoms and Their Masses	15
<i>Single-replacement reaction, Law of Definite Proportions, compounds, history of the atom, atomic mass</i>	
Activity 4: Are Atoms Indivisible?	26
<i>J.J. Thomson, Millikan, subatomic particles, electron, Rutherford, atomic structure, nucleus</i>	
Activity 5: Electronic Behavior of Atoms	35
<i>Hydrogen line spectrum, Niels Bohr, electron energy levels, atom, electromagnetic spectrum, frequency, wavelength, speed of light</i>	
Chapter Mini-Challenge	44
Activity 6: Atoms with More than One Electron	46
<i>1<sup>st</sup> ionization energy, atomic number, periodic trends, sublevels s, p, d, f, electron configurations</i>	
Activity 7: How Electrons Determine Chemical Behavior	58
<i>Valence electrons, families, rows of elements, noble gases</i>	
Activity 8: How Atoms Interact with Each Other	68
<i>Octet rule, valence electrons, metals, nonmetals, bond formation, formulas, binary compounds, ionic bonds, covalent bonds, Lewis dot structures, bonding, nonbonding electrons</i>	
Activity 9: What Determines and Limits an Atom's Mass?	77
<i>Atomic nucleus, subnuclear particles, neutron, atomic mass, isotopes, electrostatic forces, "strong force," fission, radioactive decay, half-life, fusion, <math>E=mc^2</math></i>	
Chem at Work	92
Chapter Assessment	93
Chem You Learned	96

## Chapter 2 Movie Special Effects

Chapter Challenge	98
Activity 1: Elements and Compounds	101
<i>Electrolysis, elements, compounds, chemical properties, ionic dissociation</i>	
Activity 2: States of Matter: Solid, Liquid, and Gas	110
<i>Heating curve, melting point, boiling point, sublimation, potential and kinetic energy</i>	
Activity 3: Solutions, Suspensions, and Colloids	120
<i>Tyndall Effect, filtration, homogeneous, heterogeneous, solvent, solute</i>	
Activity 4: Properties of Matter	126
<i>Emulsions, composites, elasticity, malleability, texture</i>	
Chapter Mini-Challenge	132
Activity 5: Mass and Volume	134
<i>Density, displacement of water, measurements, uncertainty, estimation</i>	
Activity 6: Metals and Nonmetals	144
<i>Properties of metals and nonmetals, metalloids, oxidation, alloys</i>	
Activity 7: Polymers	152
<i>Proteins, starch, cellulose, monomers, cross-linked polymers</i>	
Activity 8: Identifying Matter	157
<i>Flame tests, electron excitation, ions</i>	
Activity 9: Organic Substances	162
<i>Hydrocarbons, carbon bonding, alkanes, alkenes, alkynes, combustion, Law of Conservation of Mass</i>	
Chem at Work	170
Chapter Assessment	171
Chem You Learned	174

## Chapter 3 Artist as Chemist

Chapter Challenge	176
Activity 1: What Makes Something Art?	179
<i>Cultural role of chemistry, societal role of chemistry</i>	

<b>Activity 2: Choice of Media for Durability</b>	<b>182</b>
<i>Acid/base chemistry, acid/base theories, pH scale, indicators, replacement reactions, synthesis reactions</i>	
<b>Activity 3: Chemical Behavior of Metals</b>	<b>193</b>
<i>Reactivity, valence electrons, ions, octet rule, electroplating, electron configurations</i>	
<b>Activity 4: Physical Behavior of Metals</b>	<b>201</b>
<i>Alloys, brass, bronze, electron-sea model, cations, annealing, malleability, ductility</i>	
<b>Activity 5: Clay</b>	<b>210</b>
<i>Hydrates, anhydrides, mole, molar mass, nomenclature, desiccants, ceramics</i>	
<b>Chapter Mini-Challenge</b>	<b>222</b>
<b>Activity 6: Paints</b>	<b>224</b>
<i>Soluble, insoluble, solubility rules, precipitates, suspensions, anions, cations, double replacement</i>	
<b>Activity 7: Dyes</b>	<b>233</b>
<i>Organic compounds, mordant, chromophore, pH paper</i>	
<b>Activity 8: How Does Stained Glass Get Its Color?</b>	<b>241</b>
<i>Minerals, borax beads, metal oxides, ceramics, glazes</i>	
<b>Chem at Work</b>	<b>246</b>
<b>Chapter Assessment</b>	<b>247</b>
<b>Chem You Learned</b>	<b>250</b>

## Chapter 4 Chemical Dominoes

<b>Chapter Challenge</b>	<b>252</b>
<b>Activity 1: Alternative Pathways</b>	<b>255</b>
<i>Endothermic, exothermic, energy, entropy, covalent bond, ionic bond, excited state</i>	
<b>Activity 2: Balancing Chemical Equations</b>	<b>265</b>
<i>Balancing chemical equations, conservation of matter</i>	
<b>Activity 3: How Much Gas is Produced?</b>	<b>274</b>
<i>Stoichiometry, dimensional analysis, mole, molar mass, prediction, error analysis, STP</i>	
<b>Activity 4: What Can Destroy a Metal?</b>	<b>287</b>
<i>Metal-activity series, oxidation-reduction, balancing equations, half-reactions, dissolving vs. melting, acids</i>	
<b>Chapter Mini-Challenge</b>	<b>298</b>

<b>Activity 5: Producing and Harnessing Light</b>	<b>300</b>
<i>Spectroscopy, electromagnetic spectrum, energy vs. wavelength, electrolytes, batteries, visible light, phosphorescence, fluorescence</i>	
<b>Activity 6: Electrochemical Cells</b>	<b>308</b>
<i>Enthalpy, catalysts, bond energy, reaction diagrams, activation energy, activated complex, spontaneous reactions</i>	
<b>Activity 7: Reactions that Produce Heat</b>	<b>318</b>
<i>Half-reactions, spontaneity, electrolytes, Hess's Law</i>	
<b>Activity 8: Rubber Bands and Spontaneity</b>	<b>329</b>
<i>Driving forces of a reaction, system vs. surroundings, spontaneity, degree of disorder, Gibbs free energy, polymers, monomers</i>	
<b>Chem at Work</b>	<b>344</b>
<b>Chapter Assessment</b>	<b>345</b>
<b>Chem You Learned</b>	<b>348</b>

## Chapter 5 Ideal Toy

<b>Chapter Challenge</b>	<b>350</b>
<b>Activity 1: Batteries</b>	<b>353</b>
<i>Electrochemistry, redox reactions, qualitative vs. quantitative, spectator ions, cathode, anode, voltage, current</i>	
<b>Activity 2: Solid, Liquid, or Gas?</b>	<b>361</b>
<i>Molecular size, shape, polarity, polar vs. non-polar, electronegativity, intermolecular forces</i>	
<b>Activity 3: Cartesian Divers</b>	<b>369</b>
<i>Natural laws, units of pressure, Boyle's Law, gas constant, mm Hg</i>	
<b>Activity 4: Hot-Air Balloons</b>	<b>379</b>
<i>Kelvin scale, Charles's Law, kinetic-molecular theory, absolute zero</i>	
<b>Chapter Mini-Challenge</b>	<b>388</b>
<b>Activity 5: How Are Gases Produced?</b>	<b>390</b>
<i>Molar relationships, reaction types, catalysts, single- and double-replacement, balanced equations</i>	
<b>Activity 6: Ideal Gas Law for the Ideal Toy</b>	<b>401</b>
<i>STP, gas law constant, combined gas law, ideal gas law</i>	
<b>Activity 7: Moving Molecules</b>	<b>408</b>
<i>Kinetic-molecular theory, Graham's Law, limiting reagents, diffusion, effusion</i>	

# Table of Contents

## Activity 8: Plastics 416

*Types of polymers, thermoset, thermoplastic, organic compounds, monomers*

## Chem at Work 424

## Chapter Assessment 425

## Chem You Learned 428

## Chapter 6 Cool Chemistry Show

### Chapter Challenge 430

### Activity 1: Chemical and Physical Changes 433

*Chemical tests, reactants, products, molarity, concentration, saturated solution*

### Activity 2: More Chemical Changes 441

*Acid-base indicators, precipitates, signs of chemical change*

### Activity 3: Chemical Names and Formulas 448

*Chemical symbols and formulas, compounds, nomenclature, polyatomic ions, covalent bond, oxidation number*

### Activity 4: Chemical Equations 456

*Synthesis, single- and double-replacement, metal-activity series, solubility rules*

### Chapter Mini-Challenge 466

### Activity 5: Chemical Energy 468

*Heat energy, endo- vs. exothermic, conservation of energy, activations energy, heat vs. temperature*

### Activity 6: Reaction Rates 477

*Reaction rates, concentration, kinetic energy, collision theory, catalysts, surface area*

### Activity 7: Acids, Bases, and Indicators — Colorful Chemistry 485

*Arrhenius' definition, acids, bases, indicators, buffers, pH scale, titration, neutralization*

### Activity 8: Color Reactions that Involve the Transfer of Electrons 496

*Oxidation, reduction, spectator ions, polyatomic ions, galvanization, rust, metal plating*

## Chem at Work 502

## Chapter Assessment 503

## Chem You Learned 506

## Chapter 7 Cookin' Chem

### Chapter Challenge 508

### Activity 1: What is Heat? 511

*Heat vs. temperature, convection, conduction, radiation, Kelvin scale, absolute zero, calorie*

### Activity 2: Safety and Types of Fires 522

*Combustion reactions, balancing equations, hydrocarbons, Law of Conservation of Mass*

### Activity 3: Cooking Fuels 532

*Thermochemistry, bond energy, joules, mole concept, hydroxyl group, alcohols, specific heat capacity*

### Chapter Mini-Challenge 542

### Activity 4: Boiling Water 544

*Heating curves, phase changes, heat of vaporization, boiling point*

### Activity 5: Freezing Water 551

*Cooling curves, energy of phase changes, heat of fusion, melting point*

### Activity 6: How Do You Choose Cookware? 560

*Specific heat, calorimetry, conduction, alloys*

### Activity 7: How do Proteins in Foods React? 568

*Organic molecules, denaturation, functional groups, amino acids, primary, secondary, tertiary structure of proteins*

### Activity 8: How Does the Home Canning Process Work? 575

*Boyle's Law, kinetic theory, atmospheric pressure, inverse proportions*

## Chem at Work 584

## Chapter Assessment 585

## Chem You Learned 588

## Chapter 8 CSI Chemistry

### Chapter Challenge 590

### Activity 1: Clue Me In 593

*Deductive reasoning, halogens, metalloids, alkali family, alkyl earth, transition metals*

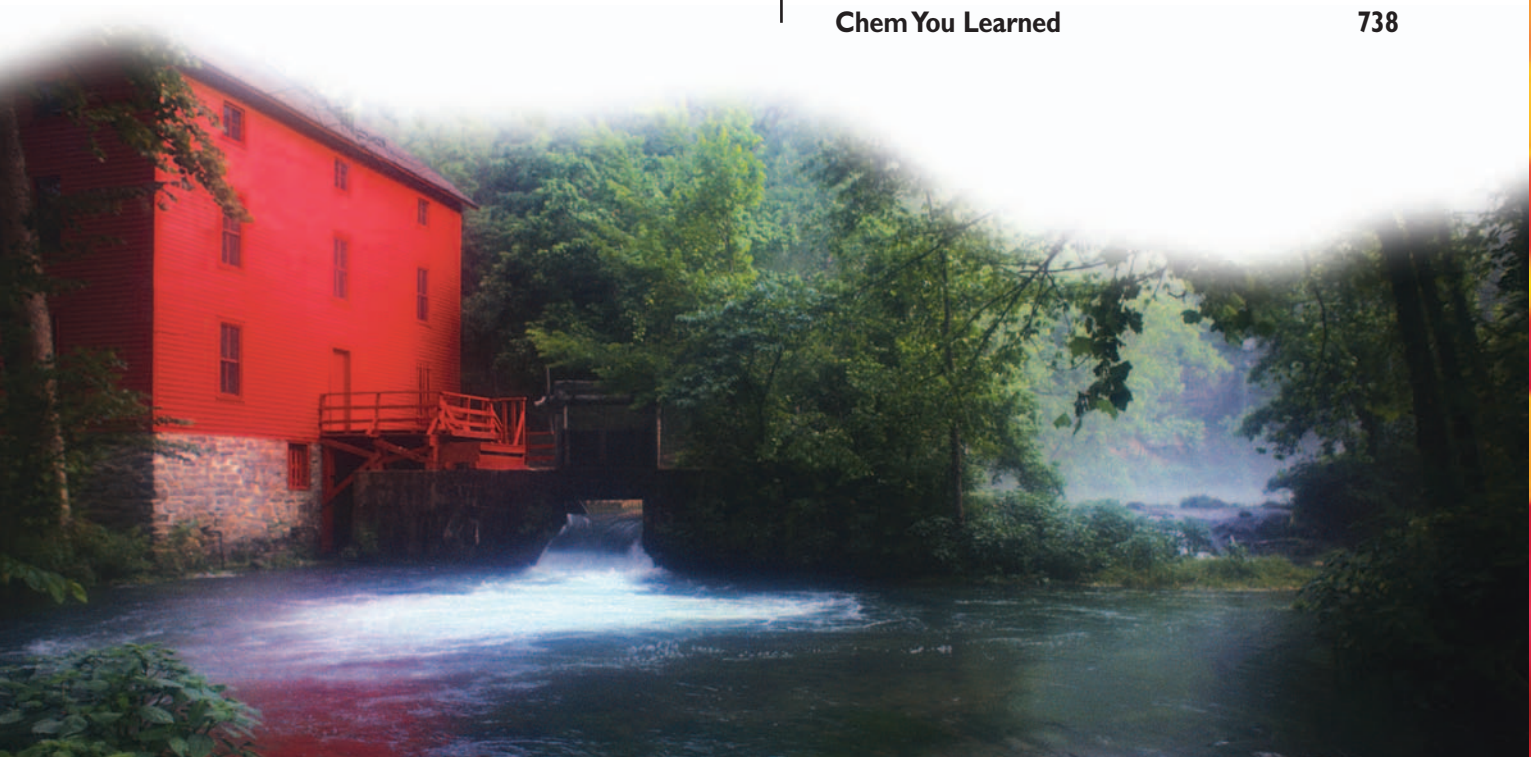

### Activity 2: Distinguishing Glass Fragments 599

*Density, graphing, extensive and intensive properties, measurements, physical properties*

<b>Activity 3: Presumptive Blood Testing: The Luminol Reaction</b>	<b>608</b>
<i>Spectroscopy, chemiluminescence, ions, ground state, excited state, energy levels</i>	
<b>Activity 4: Identification of White Powders</b>	<b>618</b>
<i>Anions, cations, polyatomic ions, solubility rules, word equations, flow charts, qualitative analysis</i>	
<b>Chapter Mini-Challenge</b>	<b>630</b>
<b>Activity 5: Developing Latent Prints</b>	<b>632</b>
<i>Fingerprint analysis, crystalline structure, oxidation, reduction, solvents, solutes</i>	
<b>Activity 6: Metal Activity Series</b>	<b>641</b>
<i>Oxidizing agent, reducing agent, oxidation number, valence electrons, transition metals</i>	
<b>Activity 7: Serial-Number Etching</b>	<b>650</b>
<i>Redox reactions, properties of metals, nanostructure of metals, etching</i>	
<b>Activity 8: Chromatographic Capers</b>	<b>659</b>
<i>Pure substances, mixtures, separation methods, mobile phase, stationary phase, <math>R_f</math> value</i>	
<b>Chem at Work</b>	<b>668</b>
<b>Chapter Assessment</b>	<b>669</b>
<b>Chem You Learned</b>	<b>672</b>

## Chapter 9 It's Alimentary

<b>Chapter Challenge</b>	<b>674</b>
<b>Activity 1: The Upper End of the Alimentary Canal</b>	<b>677</b>
<i>Hydrolysis, starch test, sugar test, Benedict's reagent, reaction rates, enzyme/catalyst, amylase</i>	
<b>Activity 2: Antacids in the Stomach</b>	<b>685</b>
<i>Titration, acid, base, pH, indicators, neutralization</i>	
<b>Activity 3: Studying Carbon Dioxide</b>	<b>693</b>
<i>Gas collection, <math>\text{CO}_2</math> test, limewater, Charles's Law, Kelvin scale, precipitate</i>	
<b>Activity 4: Observing Real Food in Artificial Stomachs</b>	<b>703</b>
<i>Catalytic action, pepsin, pH effects on catalysts, peristalsis, proteins, amino acids</i>	
<b>Chapter Mini-Challenge</b>	<b>710</b>
<b>Activity 5: Gas Pressure</b>	<b>712</b>
<i>Gay-Lussac's Law, reaction rates, Charles's Law, kinetic theory, ideal gas</i>	
<b>Activity 6: Size of Molecules</b>	<b>722</b>
<i>Scale and models, nanometer</i>	
<b>Activity 7: Hydrolysis of Lactose</b>	<b>727</b>
<i>Lactose intolerance, disaccharides, monosaccharides, glucose testing, enzymes</i>	
<b>Chem at Work</b>	<b>734</b>
<b>Chapter Assessment</b>	<b>735</b>
<b>Chem You Learned</b>	<b>738</b>

# Table of Contents

## Chapter 10 Soap Sense

Chapter Challenge	740
Activity 1: What Makes a Good Soap? <i>Experimental design, market research, detergents, soap scum, qualitative tests</i>	743
Activity 2: Modeling Molecules <i>Molecular models, Lewis diagrams, covalent bonding, saponification, functional groups, nonbonding electrons, cis/trans double bonds</i>	751
Activity 3: How Do You Clean Dirty Laundry? <i>Electrostatic forces, hydrophilic, hydrophobic, polar, non-polar, electronegativity, surfactant</i>	766
Activity 4: How Does Soap Work? <i>Polar vs. non-polar molecules, surface tension, surfactants, micelles</i>	779
Chapter Mini-Challenge	788
Activity 5: Changing the Fat: How Does Chain Length Affect Properties? <i>Melting point and freezing point comparisons, heating/cooling curves, phase transition, intermolecular forces, London dispersion forces, fats, fatty acids</i>	790
Activity 6: Changing the Fat: Does Unsaturation Make a Difference? <i>Molecular packing, single and double bonds, animal fat, vegetable fat, polyunsaturated</i>	799
Activity 7: Soap, Other Bases, and pH <i>pH scale, logarithms, Brønsted definition, neutralization, dilution, molarity, weak acids and bases, strong acids and bases</i>	812
Activity 8: Making Soap Functional and Appealing <i>Experimental design, soap additives, marketing, moisturizers, humectants, foaming agents, esters</i>	826
Chem at Work	834
Chapter Assessment	835
Chem You Learned	838

## Chapter 11 H<sub>2</sub>Woes

Chapter Challenge	840
Activity 1: What's in Natural Water? <i>Hydrological cycle, aquifer, ppm, electronegativity, hydrogen bonds, solubility rules, polar covalent bonds</i>	843
Activity 2: Factors Affecting Solubility of Solids <i>Electrostatic forces, enthalpy, disorder changes, thermodynamics, Gibbs free energy, spontaneity, saturated solutions</i>	857
Activity 3: How Much Solute Is in the Water? <i>Solubility, colorimetric analysis, precipitation reactions, titration, EDTA, water hardness, endpoint, ion-specific electrodes</i>	867
Activity 4: Aqueous Balance: Equilibrium <i>Equilibrium constant, <math>K_{eq}</math>, solubility product, <math>K_{sp}</math>, acid/base equilibria, Law of Mass Action, LeChatelier's Principle, total ionic equation, net ionic equation, spectator ions</i>	877
Chapter Mini-Challenge	890
Activity 5: Removing Suspended Particulates and Iron <i>Tyndall Effect, colloids, suspensions, filtration, coagulation, alum, rate of reaction, batch method, flow method</i>	892
Activity 6: Water Softening <i>Ionic equilibrium, separation methods, soda-lime process, ion exchange resins</i>	902
Activity 7: Removing Toxic-Metal Ions <i>Human toxicity limits, incomplete precipitation, solubility, heavy metals, distillation, reverse osmosis</i>	910
Activity Eight: Disinfection <i>pathogens, chlorination reactions, pH, acid rain, chlorinated contaminants, ozone, activated carbon</i>	919
Chem at Work	928
Chapter Assessment	929
Chem You Learned	932
Tables	933
Glossary	953
Glosario (spanish Glossary)	967
Index	983
