

NCAA Women's Basketball Champions, 1983–2004

Display 1.2

Display 1.3 is another example of a bar graph. The data are the hair colors of the students in a ninth grade class. Use that bar graph to answer these questions.

1. What are the categories in this data set? How many are there?
2. Which hair color is most common in this class?
3. List the number of students with each hair color.
4. How many students are in the class? (Assume that each student has only one hair color!)

Display 1.3

Bar graphs can also be used for displaying measurement data. Some examples of that appear in the following problems.
