

- (i) Write a short paragraph describing in words all the price information contained in Display 1.40.

5. Canada geese spend their winters in Connecticut. It may sound silly because Connecticut, a state in the Northeast, is cold in winter but compared to their home in Canada, Connecticut winters are quite warm! You've been studying the numbers of goslings they had in their gaggles in the past spring, and you find these numbers in the family units:

7, 9, 12, 9, 13, 8, 7, 6, 13, 7, 9, 13
8, 11, 14, 10, 8, 15, 14, 12, 6, 9, 13, 10

- What's a *gosling*? What's a *gaggle*?
- Make a dotplot of the data.
- What is the typical size of a gaggle of goslings (ignoring the adults)?
- Draw a boxplot for the data.
- What can you see in the dotplot that you can't see in the boxplot?
